Dear Sir,

Re: ICE Sheffield – Air Tightness Results

Following successful test results for air tightness on the above project, we wish to thank your company for their expertise and professionalism demonstrated throughout the contract in terms of the design and construction of an envelope for air tightness.

Taking into consideration the acoustic restraints, with perforated roof and wall panels, to achieve an air leakage rate of 5m³/hr/m² is a measure of the responsibility your company took in providing a good envelope design with attention to detail and clear workable methods of construction.

Your understanding and appreciation of what is required to achieve such a specification then filtered into your construction activities with excellent site quality and compliance with agreed design details.

Thankyou once again, and we look forward to working with yourselves in the near future.

Yours faithfully,

PP A D Fitzgerald
Design Manager
